

The Spray Tanning Process...

You will be sprayed or “misted” by a technician using a turbine sprayer. In most cases you can wear as much or as little as you are comfortable with.

Clothing

It is a good idea to wear dark, loose fitting clothing to avoid rubbing off areas of your tan.

Before...

For a smoother, longer lasting tan, it is important to shave, exfoliate and moisturize with products available at your tanning location. Just ask your technician for product details.

Aftercare...

After your first shower, use a lotion designed for use with spray tanning to re-hydrate your skin and slow cell turn-over rate. Don't get wet or engage in activities that will cause sweating.

while your tan is developing. Avoid, light colored upholstery, on the day of your tan and chlorine for the duration

Who Does it...

You name it... actors, models, athletes, people on the go, people who just want to look their best at all times without the skin damage and potential health problems associated with UV tanning.

What To Expect..

Your custom spray tan application will provide a more even and natural looking tan than a tanning booth.

With proper preparation and care you can expect your tan to last from 5-12 days.
